

PERSONALIA

I am a 30 year old Norwegian, born, grown up and with undergraduate studies in Trondheim, Norway. Moved to Zürich, Switzerland for graduate studies. Interested in mathematics, computing, programming, photography, chess and books.

Ph.D., computational science 2009-09 → 2013-11
ETH Zürich, Zürich, Switzerland
Solving high-dimensional kinetic transport equations, bridging the “curse of dimensionality”. Particular focus on Shearlet frames and the Boltzmann equation.

Master of Technology, industrial mathematics 2004-08 → 2009-06
NTNU, Trondheim, Norway
Specialisation in numerical analysis and differential geometry.

EXPERIENCE

Research Scientist 2014-05 → present
SINTEF Applied Mathematics, Trondheim, Norway
Large-scale parallel simulations using isogeometric analysis finite element methods.

Ph.D. student 2009-09 → 2013-11
ETH Zürich, Zürich, Switzerland
Solving high-dimensional kinetic transport equations, bridging the “curse of dimensionality”. Implementation in Matlab and Python. Includes a 40% teaching load.

Software engineer Summer 2009
Jeeves, Trondheim, Norway
Implemented a translation tool built on Google Translate, which can read and write a number of different formats (such as Microsoft Word and database tables), with some facilities for correcting erroneous translations and learning.

Software engineer Summer 2008
Yahoo! Technologies, Trondheim, Norway
Implemented an adapter between MySQL and Yahoo’s internal vertical search platform Vespa, together with several demo cases. Responsibilities included the entire process, from design to completion.

Scientific assistant Summer 2007
ETH Zürich, Zürich, Switzerland
Implemented a finite volume method for solving the convection/diffusion/reaction equation in Matlab. Also did some post-processing of photonic crystal simulations. This was an IAESTE internship.

PROJECTS

HF-PFC: Hydraulic fracture (phase field code) 2015-07 → present
Partners: SINTEF, Statoil
A continuation of the FFG project (see below), this project aims to extend the spline-based poroelasticity solver with fracture mechanics, and to test the resulting product on real-scale problems and data.

FFG: Fractures, flow and geomechanics 2014-12 → 2015-06
The internally funded FFG project aims to develop simulation tools for coupled flow through porous media, elasticity and fracture.

- Implemented a spline-based solver for poroelasticity problems.
- Presented results at 3rd IGA 2015.

LS-TES: Large Scale Thermal Energy Storage 2014-09
Partner: SINTEF, NEST, NTNU

The LS-TES project aims to develop effective storage solutions for thermal energy. The project involves a coupled heat flow and thermal elasticity simulation.

- Implemented a modular and fully parametrizable exact spline-based mesh generator for heat reservoirs in various configurations.

FSI-WT: Fluid-structure interaction for wind turbines 2014-05 → 2014-12
Partners: SINTEF, NTNU, MET, FFI, Statoil, TrønderEnergi, Kjeller Vindteknikk, Windsim

The FSI-WT project aims to develop robust and efficient numerical simulation tools for coupled fluid-structure interaction simulation of full scale wind turbines, with a particular emphasis on offshore wind power.

- Implemented and presented a modular, fully parametrizable and efficient spline-based mesh generator for wind turbine blades.
- Presented results at 27th NSCM 2014 and 12th Deepwind 2015.

SKILLS

Programming: Python, Matlab, Haskell, C, C++, C#, Java, PHP, JS

Databases: PostgreSQL, MySQL, MS SQL

Assorted computer: ~~TEX~~, (X)HTML, CSS, XML

Operating Systems: Assorted Linux distributions, Windows

Languages: Fluent Norwegian and English, decent German

AWARDS

- Winnie and Ragnar Mathisen's award for best student of technology or architecture in the 2009 graduating class at NTNU.
- The Norwegian Computing Centre's award for best master thesis in mathematics or ICT at NTNU in 2008/09.
- The Stubban award for the most promising master candidate in mathematics at NTNU among the 2009 graduating class.

ASSORTED

- Founder of the Aligulac project¹, a rating system and historical database for professional Starcraft II, now maintained by a team of about 15 volunteers.
- Part organiser of the inaugural edition of KoMiN—a now annual conference for mathematics students in Norway.
- Designed problems, graded answers and maintained the website for the Abel Competition, the Norwegian mathematical olympiad for high school students.
- Driving force and main organiser of the first two editions of the Norwegian Rubik's Cube Championship.
- Former national record holder in Rubik's Cube speedsolving and speedsolving while blindfolded (single and multiple).

POSITIONS OF TRUST

- Webmaster² and board member for the IAESTE Local Committee Zürich for four years (2010-2013).
- Recognised by the World Cubing Association as a competition delegate.
- Webmaster and board member for the Student association Nabla at NTNU for three years (2005-2007).

POSTERS

Spline based mesh generator for high fidelity simulation of flow around turbine blades.
E. Fonn, A. Rasheed, A. M. Kvarving, T. Kvamsdal. *12th Deep Sea Offshore Wind R&D Conference, Deepwind 2015.*

Isogeometric methods for CFD and FSI-simulation of flow around turbine blades.
T. V. Opstal, **E. Fonn**, T. Kvamsdal, A. M. Kvarving, K. M. Mathisen, K. Nordanger, K. M. Okstad, A. Rasheed, M. Tabib. *12th Deep Sea Offshore Wind R&D Conference, Deepwind 2015.*

Strip theory approach for FSI-simulation of flow around turbine blades.
K. Nordanger, T. Kvamsdal, A. M. Kvarving, K. Nordanger, A. Rasheed, M. Tabib, **E. Fonn**, T. V. Opstal. *12th Deep Sea Offshore Wind R&D Conference, Deepwind 2015.*

3D beam element for FSI-simulation of flow around turbine blades.
K. M. Okstad, K. M. Mathisen, T. Kvamsdal, A. M. Kvarving, K. Nordanger, A. Rasheed, M. Tabib, **E. Fonn**, T. V. Opstal. *12th Deep Sea Offshore Wind R&D Conference, Deepwind 2015.*

3D CFD and FSI-simulation of flow around turbine blades.
A. M. Kvarving, T. Kvamsdal, A. Rasheed, K. M. Okstad, E. Fonn, K. M. Mathisen, K. Nordanger, T. V. Opstal, M. Tabib. *12th Deep Sea Offshore Wind R&D Conference, Deepwind 2015.*
